

Speed Sensing Notes

- (1) Input is to be used for a magnetic pickup (MPU) sensor, alternator, or tach output.
- (2) Not required if using AC Voltage for speed sensing.
- (3) The polarity of the inputs does not matter.
- (4) Use twisted pair shielded cable. Leave one side of shield unterminated.
- (5) If using a MPU:
 - (a) A shielded MPU is recommended.
 - (b) One side of the mag. pickup also has to be connected to ground in addition to the controller.

CAN (TG350/TG410) and RS485 (TG410) Connection Notes

- (1) A 120 Ohm impedance twisted pair cable is required.
 - (a) Examples are Belden 9841 (single twisted pair) and Belden 7895A (two twisted pair).
- (2) RS485 requires an extra wire or twisted pair in the cable for RS485 common.
- (3) To prevent noise affecting controller operations bring the shielded cable within at least 6 inches of the terminal. Closer to 3 inches is better.
- (4) Terminate the bus on each end with a 120 Ohm resistor.
- (5) Ground the shield on one end. Leave the other end unconnected.

AC Current (CTs) Notes

- (1) If current readings are unstable attempt connecting the CT Common's to ground. Ensure the connecting wire is as short as possible.

Sensors

- (1) If using non-isolated (one-wire) sensors connect sensor common to battery negative. Make connection at the same point the main ground connection is made.
